

FIBERTECH™

Stop Cracks Before They Start

WHY CHOOSE FIBERTECH?

From slabs, driveways and sidewalks, to pool decks and patios, today's construction projects include more concrete features than ever. For these applications and others, trust our FiberTech - it's an easier, safer way than steel reinforced slabs.

BENEFITS OF FIBERTECH

FiberTech concrete provides:

- Controls plastic shrinkage cracking
- * Inhibits plastic settlement cracking
- * Increases freeze/thaw durability
- * Resists impact and shatter forces
- * Lowers water migration in concrete
- * Easily mixes into your concrete

DOES YOUR PROJECT REQUIRE FIBERTECH?

While fiber-reinforced concrete has many advantages over traditional concrete mixes, it is not a requirement for many projects. Our sales representatives will assess your project and suggest if FiberTech should be considered.

IMPORTANT INFORMATION

- Our FiberTech mixes are generally composed of polypropylene fibers. If your project requires steel fibers, please contact your sales representative.
